

URPL 711
Marketplaces and Food Systems
When: R 12:30-3:00 pm
Where: Music Hall 208

“Let me cordially warn you, at the opening of [this so-called class], that I haven’t the remotest intention of posing as a lecturer. Lecturing is presumably a form of teaching; and presumably a teacher is somebody who knows. I never did, and still don’t, know. What has always fascinated me is not teaching, but learning; and I assure you that if [the responsibilities related to becoming a “professor” hadn’t so entangled me] I should now be somewhere else. Let me also assure you that I feel extremely glad to be here; and that I heartily hope you won’t feel extremely sorry.”

e.e. Cummings, i, six nonlectures

“I cannot teach anybody anything, I can only make them think.”

Socrates

“I don’t even make them think, I provide them things to think about and together we discover new things and ways of thinking.”

Alfonso Morales

Alfonso Morales, PhD
Office Hours: by appointment
Office: Music Hall 104
Phone: 263-4848
E-mail: morales1@wisc.edu

Overview

Elements of food systems and marketplaces have been the purview of entire disciplines. Horticulture, Agriculture, Sociology, Economics, Rural Sociology, Planning, Law, Political Science, Anthropology – so many disciplines were founded on food-related transaction. However, the “industrialization” of food displaced intellectual concerns to the margins of some disciplines and condensed the concerns of other disciplines focusing them on supporting the burgeoning “industrial” food sector. Roughly between 1910-20s (the introduction of public policy using marketplaces and for food safety and related concerns; and the application of regression analysis to food production) and the 1970s (back to the farm, food safety, etc), food safety improved and productivity increased. However, the prior intellectual fecundity associated with food studies disappeared until a generation of farmers with different roots, rural and urban,

University of Wisconsin-Madison

renewed our general interest in food *per se*, slowly supplying scholars with a nourishing mixture of concerns that reinvigorated various disciplinary interests and stimulated emergent interests in various disciplines. Since the 1970s authors and community organizations have introduced food-related activities throughout society, and further, scholars and community members have reunited themselves to policy makers in reconstructing a century-old political interest in the food system. My task here is to give you some sense of this intellectual landscape, with an emphasis on contemporary community and regional food systems (CRFS) as exemplified in the UW AFRI funded project on CRFS.

We can never fully conceptualize food systems or markets (context will usually make clear when I use the term markets for marketplaces vs. markets in the economic sense of a price clearing mechanism) because context matters and varies and we cannot judge them fully because success is not reducible to a single metric. Like the proverbial elephant, food systems and marketplaces implicate virtually every sub-discipline of planning and most every other social science, inclusive of manifestations in law, business and health (and vice versa). Physical design, regulations and enforcement, community and economic development, health and sustainability, transportation, all intersect in marketplaces, with respect to the food system and in what some call “geoponica.”¹

Mostly delivered by private means, markets and the food system serve the greatest variety of public and private goals. Our study of the food system will introduce us to people in many contexts, working with food in many ways, and we will consider the “industrial” food system, but will focus mostly on alternative policies, programs and plans intended to improve CRFS. Food system activities synthesize many concerns and they are difficult to delimit, thus our interest in them risks leaving some complaining that we do not know what we *really* want to study.

Alas, here we go.

Learning Objectives

The course has three broad learning objectives, to develop content knowledge of food systems and markets, to make connections in the broad community of food systems planning, and to make food system/marketplace contributions to the community, as required in class and as you determine what that means to you. The field we study is constantly changing and is becoming populated with innovative arguments for and against creative new examples of food systems practices. New legal devices, business models, production practices, social organizations, and etc. are emerging and it will be up to you to discover the latest innovations in what you want to know.

¹ **ge•o•pon•i•ca** [ˌjee,uh,'pon,ik,ah] -*noun*: agricultural pursuits in the broadest sense, including but not limited to the art and science of agriculture

University of Wisconsin-Madison

By the end of class students will have improved their knowledge of:

- The Food System and the urban/regional ecosystem
- Food system assessment
- At least one alternative program, policy, or plan intended to improve CRFS
- Food system planning
- Grant writing
- Their own particular interests in the food system

By the end of class students will have contributed to:

- The UW-AFRI CRFS project
- The Food Glossary project
- The public's knowledge of the food system

Starting the first day of class you will begin to develop an individual learning plan for yourself. This will help you identify what you know and what you want to learn.

Class Webpage

<https://sites.google.com/a/wisc.edu/urpl711/>

Class Meetings

This course will be structured as a seminar. I will lecture, but each week we will begin the day with a ten-minute discussion of recent food-related news.

You can expect to lead at least one discussion of a reading. The following is a guide:

- The argument made in the reading
- The readings' relative significance
- The methods and data
- Some critique of the reading
- Pose two questions to stimulate discussion.

Field trips and guest lecturers will supplement our class activities and discussions. It is a good idea to bring your laptop to class.

At root, this course is about you refining your professional interests in markets and food systems. Given we all have different interests, we have a need for *respectful but critical* engagement with one another. Keep in mind that seminars are places where you are *expected* to question one another's ideas, state

University of Wisconsin-Madison

reasons for agreement for disagreement, and help one another learn. We should be grateful to those who help us sharpen our views by disagreeing with us.

Course Requirements

Participation is assumed – excellence expected. This means that you come to class having completed assignments and readings.

There are very few assigned readings. The field is changing rapidly and I can't keep up. I do supply you some recommended readings and a list of books (I have others in my office). Thankfully folks tell me about interesting readings, ordinances, and activities and I will share them. However, I expect you to find an additional 40-60 pages of reading each week (reasonable variation is fine), associated with your particular interests. I expect a 3-5 paragraph summary of the basics, thesis or research question or policy, methods, findings, implications and I will randomly request a few of you to discuss your summaries in class and email these summaries following class.

Graded Activities

The first problem associated with any field is identifying, learning, and mapping the conceptual apparatus, the language, or the ideas/behavior associated with

University of Wisconsin-Madison

that field. The first course requirement addresses this problem in two parts, each requiring some research and some writing, which is how one comes to know the “language game” of interest.

1. Food and Markets Glossary – There are two parts to this assignment. First, each student will contribute 5 entries to a glossary. The contributions will be to the Wiki found at:

<http://foodglossary.pbworks.com/w/page/31253712/FrontPage>

Second, each student will also review 10 entries for clarity and comprehensiveness. Entries should be as short as possible, but will probably require two brief paragraphs. Include references and examples as necessary.

Sign on ASAP – mark your selected entries with your initials and a –e for entry or a –c for checked, e.g. Food System, am-e, or market, am-c. **Due October 4**

2. Community Presentation – this is a presentation you make to a community group of your choice. You will identify a group, decided on a food-related topic, schedule and deliver a 10-15 minute presentation. Any Church group, civic organization, school or other non-UW organization is fine. (Potential audiences found in: <http://www.thedailypage.com/annualmanual/>) I expect you to submit your presentation and three (short, hand written) evaluations from attendees of the lecture – the form follows this syllabus. **Due November 30**

3. Class presentation – this presentation is an academic presentation you make in class of about 20 minutes with 20 minutes of discussion. This presentation should describe your academic interest in the food system, lay out the intellectual antecedents of that interest, and describe the research questions you think people should be pursuing and why. This is not a policy talk, policy implications are fine, but this is a talk on the academic/research questions and findings associated with your interests, how do you know what you know and what does that imply for what you want to know. **Due when you want – the sooner the better, but note my absences.**

4. AFRI Assignment – This assignment will support the work of the UW USDA-AFRI project, found at <http://www.community-food.org/> This will be a literature review, or other work as deemed useful to the project. (How to manual, how to permits, city annotations and reviews, work with a community organization, etc.) It's likely that the work will be with organizations in Los Angeles, Denver, Kansas City, Cedar Rapids, Chicago, and Madison. **Due December 6.**

5. Final Paper. This assignment is described after the course schedule, due dates are in the syllabus.

Required Readings:

University of Wisconsin-Madison

You can find required readings from academic journals using Findit on the library webpage.

Other course readings will be emailed to you or found at the UW-google site. If you are interested in a book I suggest below, you look at abe.com or Amazon for used copies.

A list of recommended books is provided at the end of the syllabus.

Grades

Final course grade is on 100-point scale:

Grades are calculated as follows:		Your final grade is based on the following scale:	
Wiki entries	15% 3 points each	A	93 – 100
Class Presentation	10% 0-10 points	A/B	92 – 87
Community Presentation	20% 0 OR 20 points	B	86 – 82
AFRI Assignment	20% 0-20 points	B/C	81 – 76
Final Paper	35% 0-20 points	C	Produce better work!

Summary Class Schedule with Assignment Due Dates

Field Trip days are days we will not meet in class – you are expected to use the time over the course of the semester to visit Community Ground Works or some other appropriate site(s) appropriate to your interests.

September 6 Oxford Test and Introduction to USDA AFRI grant and etc.

Suggested Books

Over the last few years I have read the following books. You can consider them recommended readings. They each have something of interest, even if I have quibbles with each one. I suggest you Google them and read reviews to find books of interest to you. Those marked with a * are salient to various kinds of planners. Many deliver the same basic message.

- *Allen, Patricia. Together at the Table
- Astyk and Newton. A Nation of Farmers
- *Barlett, Peggy. Urban Place: Reconnecting with the Natural World
- Berger, Drosscape: Wasting Land in Urban America
- Blatt, Harvey. America's Food
- *Corum, et al. The New Farmer's Market
- Counihan and Van Esterik. Food and Culture
- Desrochers and Shimizu The locavore's dilemma in praise of the 10,000-mile diet
- *Dewar and Watson. Urban Markets
- *Feldt, Barbara. Garden Your City
- Franck, Food and the City
- *Hinrichs and Lyson. Remaking the North American Food System
- Katz, S.E. The Revolution Will Not Be Microwaved
- Kingsolver, Barbara. Animal, Vegetable, Miracle
- *Koc, et al. For Hunger Proof Cities
- Lang and Heasman. Food Wars
- *Lawson, Laura. City Bountiful
- Lyson, Thomas. Civic Agriculture
- *Mougeot, Luc. Agropolis
- *Mougeot, Luc. Growing Better Cities
- Nestle, Marion. Food Politics

University of Wisconsin-Madison

Nordhal, Public Produce
Patel, Raj. Stuffed and Starved
Petrini, Carlo. Slow Food Nation
Pollan, Michael. The Omnivore's Dilemma
Pollan, Michael. In Defense of Food
Register, Richard. Ecocities
Roberts, Paul. The End of Food
Schut, Michael. Food and Faith
*Tinker, Irene. Street Foods
Trubek, Amy. The Taste of Place
*Viljoen, Andre. Continuously Productive Urban Landscapes
Weber, Karl. Food INC.
Wilk, Richard. Fast Food/Slow Food
*Willand and Bell. Edens Lost and Found
Winne, Mark. Closing the Food Gap
*Woelfle-erskine, Cleo. Urban Wilds
PAS report **554**. A Planners Guide to Community and Regional Food Planning: Transforming Food Environments, Facilitating Healthy Eating. Samina Raja, Branden Born, and Jessica Kozlowski Russell. 2008. 108pp.
PAS report **563**. Urban Agriculture: Growing Healthy, Sustainable Places. Kimberley Hodgson, Marcia Caton Campbell, and Martin Bailkey. 2011. 148pp.
The children's books: *Seedfolks* by Joanna Colter and *The Pushcart War* By Jean Merrill.

The recommended readings may help you fill in the food system from other disciplinary perspectives. Pick and choose between them as you see fit. Your recommendations for other readings are welcome for the next iteration of this class.

THANKS FOR THE CLASS, HAVE A GREAT BREAK!!

URPL 590: Markets and Food Systems – Final Paper Assignment

You have three options for this final paper assignment. You may work with me on research for a publication, or you may write a paper that represents progress toward your Masters project or thesis; this might mean continuing work you've been doing; or it could mean initiating research that will be ongoing; your third option is to write a "standard" term paper on an issue related to public markets and food systems. If you choose to work with me you will select from a number of projects that I currently writing about. Contingent on your contribution you could become a co-author of that article.

University of Wisconsin-Madison

I will work with up to five students. Review the topics below (both the * and non * topics could change) and contact me soon. Our first meeting should be no later than September 22.

For those of you choosing the term paper option select a topic from those below the list of my topics or come up with one on your own. These topics are broad, refine them as suits your interests. Topics are due October 14, including a one-paragraph description of the topic and a four-sentence outline of your thesis and supporting sub-theses. The final paper should be about 3000 words long, not inclusive of notes, graphics, or references. Further instructions follow the list of topics.

Morales research (* top priorities, but the list could change):

- *Agripreneur/Modular and Sustainable Poultry Production in MN (finish the paper I have)
- *Chicago, The Resurrection Project integration of gardens and housing and etc.
- *Meta analysis of food assessments (find and analyze these)
- *History of marketplaces (primary research required here and work with my existing ideas)
- *Analysis of citations given to street vendors in New York City (partial database complete, work with GIS, literature review needed)
- *Micro politics of locating and developing marketplaces: The Case of the Westside Market (partial draft of paper, more basic research and writing)
- *Interstate food law
- *Denver Urban Gardens research and proposal
- *Production research

General Research Topics in Food Systems and Markets:

Food systems and/or markets in other countries
Creating markets/planning for food systems or markets
Food policy councils
Community gardening
Health and the food system/diet related issues and etc.
Schools and food/Food and institutional buying
Farm to market and the question of scale
Food waste
Community kitchens
Urban food deserts
Wal-mart, Whole Foods and the evolution of (organic) retail
Community organizations, markets and food systems
Urban agriculture
Measurement problems in food and markets

University of Wisconsin-Madison

If you choose to write a term paper:

Overview

The purpose of the assignment is *both* to learn about the intervention/policy and relevant literature, and also to critically evaluate it. Every intervention/policy has strengths and limitations; your paper is not an advocacy piece, but rather, a considered review of the topic. Advocating for a policy based on your ideas is fine, but it's even better when your advocacy is founded on a critical assessment of the policy options and followed up by a complete argument for your position.

Paper Components

The paper should follow a typical paper format with a thesis and three subtheses, and etc. I can provide you a model I use. In any case the paper should cover three things:

1. Description of the problem/opportunity, including background, context, magnitude, place in the larger system(s) of ideas/behaviors.
2. Short overview of relevant existing interventions and community resources/strengths.
3. Proposed intervention or policy.

Note that the intervention or policy you propose may have multiple components; however, for the purposes of this paper, I want you to focus the bulk of the discussion in-depth on one central element. You should outline the other components and how they fit together. Also, in choosing interventions, consider tradeoffs between broad/general strategies with broad, general results, vs. focused strategies with more limited but potentially more direct results.

- Describe the intervention/policy and state its goals concisely in bullet form
- Review relevant literature. Non-peer reviewed sources may be used to supplement peer-reviewed sources.
- Use literature and critical thought to discuss your strategy in terms of the following criteria.* Where information is not available, you may speculate.
 - Effectiveness
 - Feasibility
 - Cost feasibility
 - Sustainability
 - Ethical acceptability
 - Political will
 - Social will
 - Potential for unintended benefits
 - Potential for unintended risks
- Summarize key barriers and what it would take to institute your proposed intervention
- Optional: briefly suggest an evaluation strategy

4. Discussion and conclusions.

University of Wisconsin-Madison

* From the Intervention Decision Matrix (Fowler CJ & Dannenberg AL, 1995. Revised 1998, 2000, & 2003 Johns Hopkins University). You are not required to address all the questions listed.
